Understanding KYC Batch Upload Process

Version 1.1

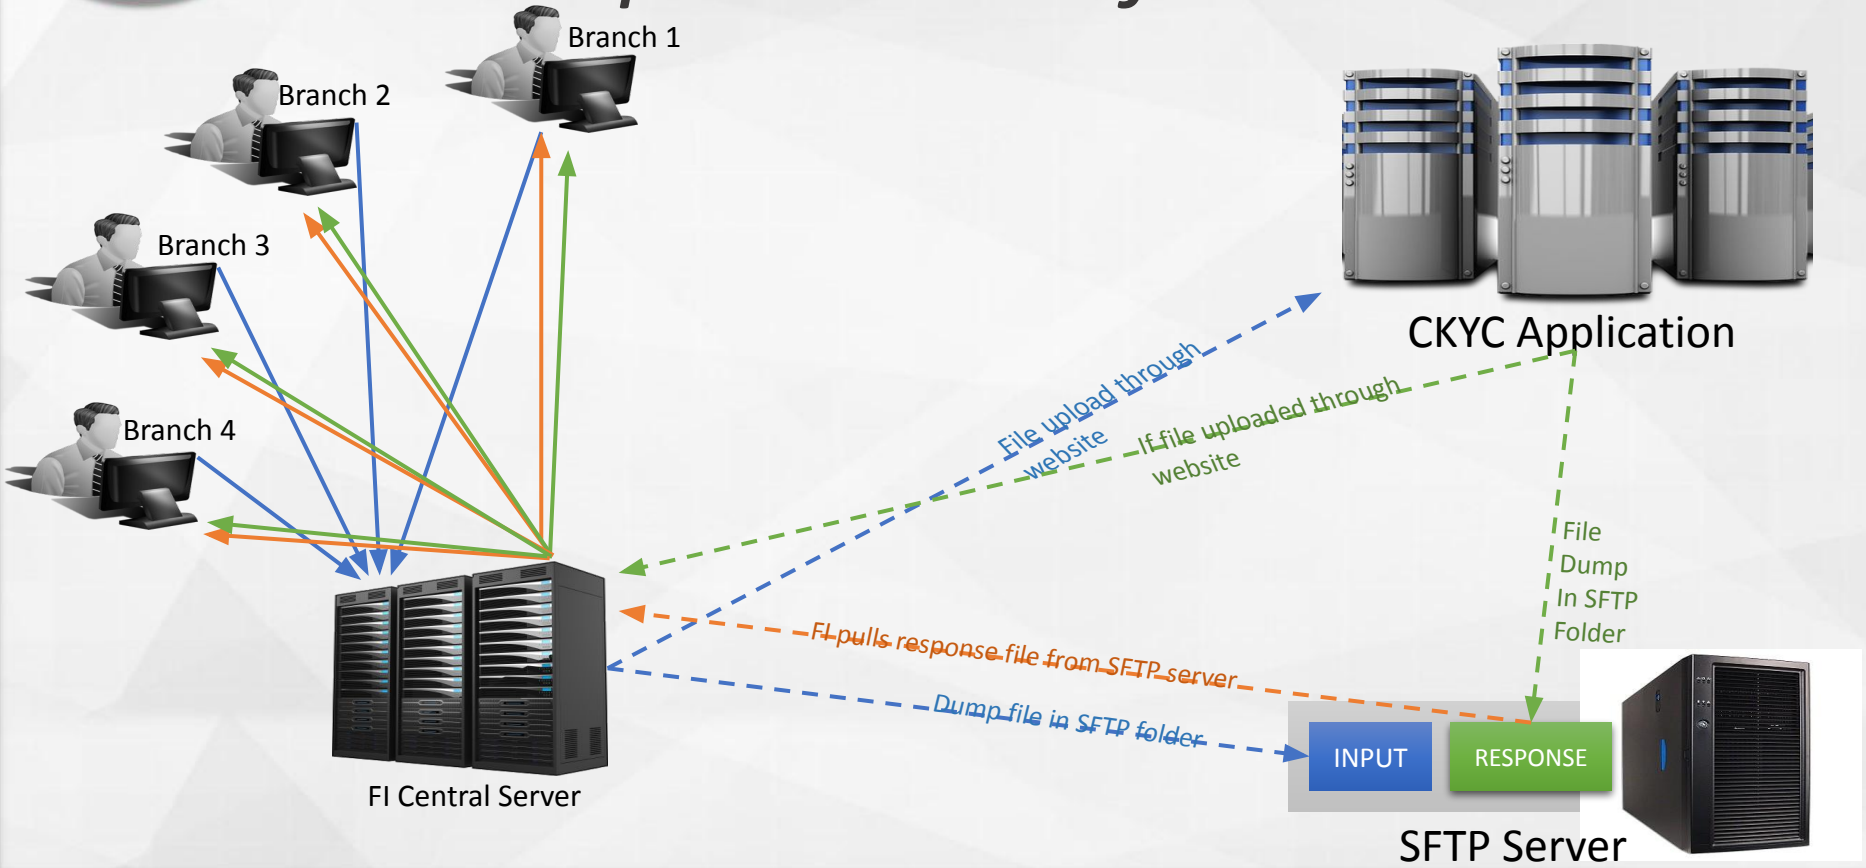
Background

- Financial Institution (FI) can upload KYC records in CKYC application through screen based single entry as well as through batch upload facility.
  - Web portal – Maximum 20 records in single file
  - SFTP- upto 10 GB file
- A digitally signed zip file containing metadata (in pipe separated TXT file) and images (customer wise separate zip folder)

Benefits of Batch Upload

- **Avoiding duplication of work:**
  - Entering KYC data in CKYC portal as well as in back office software
- **Better user management:**
  - No need of procuring branch level digital signatures for users. With minimum two users for CKYC portal all CKYC operations can be handled
- **MIS reports and better control**
  - Automated processing system can be developed by the FI for better understanding of KYC status and auto processing of KYC records.

Batch upload work flow



Pre-requisites

- SFTP Setup
  - FI's public IP should be whitelisted at CERSAI end.
  - CKYC's public IP should be whitelisted at FI's end
  - SFTP client (File Zilla or Winscp) application should be installed at FI end
  - Credentials required for to login in SFTP folder
- Zip file signer application should installed at FI end.

File Uploading Process

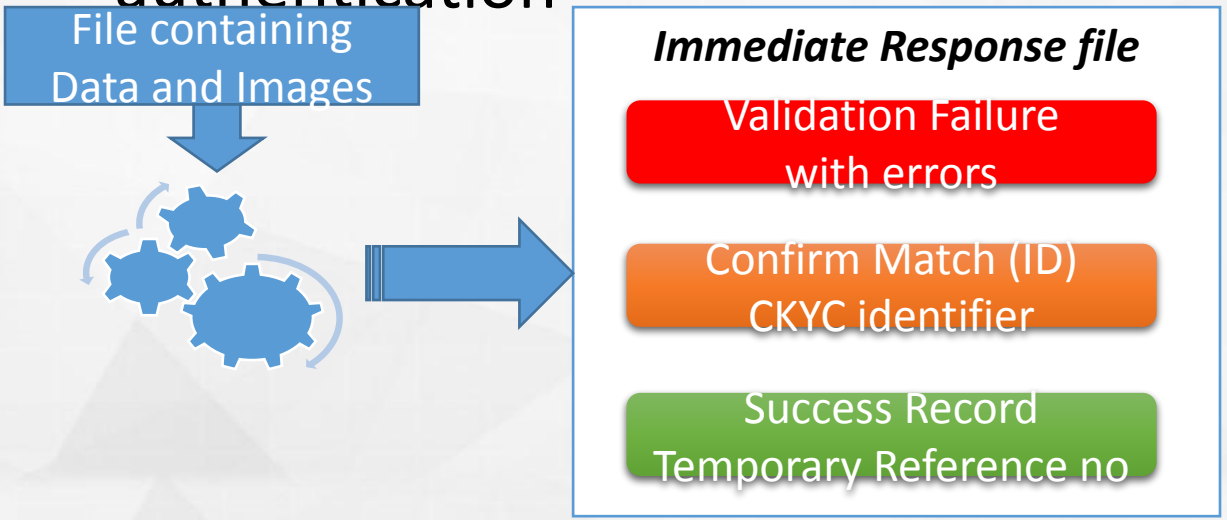
- Maker Process
  - Through CKYC web portal
    - Login by maker and file upload (KYC Management Bulk KYC Upload)
    - In case of issue in final naming, system will prompted error messages
  - Through SFTP process
    - Login in CKYC SFTP folder
    - Uploading file in ‘input’ folder
    - Once file copied successfully, upload trigger file in ‘input folder
    - In case of issue in final naming, system will error message file in ‘response’ folder

File Uploading Process

- Checker Process
  - Successful batch file(s) uploaded through CKYC portal or SFTP server will be listed in KYC Management Bulk KYC Authorization page
  - Checker shall authorized the bulk upload file.
- Processing
  - CKYC system will process the records (validation, Balance check, de-duplication, ID authentication, KYC no generation)
  - After processing user may download following response files from SFTP folder or CKYC portal (LINK)
    - Immediate Response
    - Periodic Response file

Immediate Response file (Stage 1)

- Batch wise file will be generated after the checker authentication



- Rectify the errors
- Re-upload the records in new file

- Record already exists
- Download record on the basis of CKYC identifier and DOB

- Record successfully accepted
- Note temporary reference number for future communication

Periodic Response

- Successful records will be go through following process cycle
  - Stage 2 – Balance availability check
  - Stage 3 – Post de-duplication verification
  - Stage 4 – Post ID authentication
  - Stage 5 – KYC number generation
- Periodic response file contains status of record at that point of time where FI intervention/action requires to complete KYC generation process.
- Total 10 periodic response files will be generated in a day

Periodic Response

- Important points
  - Batch number will be available at record no
  - FI reference number (customer ID at FI end) and temporary reference number generated by CKYC application record will be available
  - Latest status of the uploaded recorded will be provided in the period response file
  - FI may store the latest status of KYC and take required action
  - Once record flagged with any status in a per, it will not repeat until status of same record is not getting change.

Periodic Response

Stage	Detailed Response	Action at FI end
2 Balance Check		*>> Refill the amount in wallet*
3 Deduplication	3 Confirm Match(Download) 4 Probable Match 2 Reject	*>> CKYC number already exists, download the same* *>> Download FI recon file and take decision* *>> FI Recon TAT lapsed, upload record rejected*
4 ID Authentication	5 ID not confirm	*>> Rectify the Name/ID details and* Re-upload the records in new file
5 KYC number generation	1 Success	*>> KYC number generated, no further action required*

Periodic Response

- Upload Scenarios

Scenario	Request Type	Response Type	Record Status	CKYC number	FI action
Insufficient balance	01 – New	02 - Insufficient Balance	N/A	N/A	
Post De-dupe probable match	01-New	03-Post De-duplication	03- Download	CKYC No.	
Post Dedupe-confirmed match	01- New	03-Post De-duplication	04- Probable match	N/A	
Post confirmation with ID issuer –ID not confirmed	01- New	04- Post confirmation with ID issuer	05- ID not confirmed	N/A	
Post Probable match recon – confirmed match	01- New	03- Post De-duplication	03- Download	CKYC No.	
Post probable match recon FI resolution recon TAT lapsed	01- New	03- Post De- duplication	02- Reject	N/A	
KYC Generation	01- New	05- Post KYC Generation	01- Success	CKYC No.	

Periodic Response

- Update Scenarios

Scenario	Request Type	Response Type	Record Status	CKYC number	FI action
Insufficient balance	03- Update	02 - Insufficient Balance	N/A	N/A	
Name/ ID update	03- Update	04- Post confirmation with ID issuer	05- ID not confirmed	N/A	
Probable match recon	03- Update	03- Post De-duplication	04- Probable match	N/A	
Confirmed match post FI recon	03- Update	03- Post De-duplication	03- Download	CKYC No.	
Update confirmed	03- Update	05- Post KYC Generation	01- Success	N/A	
Update post probable match recon	03- Update	03- Post De-duplication	02- Reject	N/A
